

Meech

Your Global Partner for Web
Cleaning Technology

www.meech.com

Are you unsure which type of web cleaner best suits your applications?

We are here to help!

The basic question..

Do you require a contact or non-contact solution?

Our CONTACT CLEANERS

... are used where contact with the web isn't a concern, physically touching the surface of the web to ensure surface contamination removal.

Our NON-CONTACT CLEANERS

... offer a method of cleaning delicate surfaces, avoiding physical contact that could impact surface quality and finish.

The Meech Air Cooling range has been designed to provide effective cooling for any number of applications. At the heart of the range is the Vortex Tube. Running solely on compressed air, Meech Vortex Tubes separate the inlet air into two air flows, one very hot the other very cold. Capable of providing up to 2,400 Btu/hr of cooling and achieving temperatures 50°C below the compressed air temperature, the Vortex tubes are commonly used for spot cooling, cabinet cooling and machine cooling. The range also has no moving parts and is therefore virtually maintenance free.
